```
The invention relates to isolated nucleic acid molecules and their concoded secreted proteins. The nucleic acids and proteins are used to grevent, treat or ameliorate a medical condition in e.g. humans, mice, crabbits, goats, horses, cats, dogs, chickens or sheep. They are also used in diagnosing a pathological condition or susceptibility to a gathological condition. Antibodies to the proteins can also be used in calleviating symptoms associated with the disorders and in diagnostic calleviating symptoms associated with the disorders and in diagnostic calleviating symptoms associated with the disorders and in diagnostic careful calleviating symptoms associated with the disorders and in diagnostic careful calles of the breast or liver, cardiovascular disorders e.g. cardiac neoplasms of the breast or liver, cardiovascular disorders e.g. cardiac nerveit, cerebrovascular disorders e.g. cerebral ischaemia, angiogenesis, careful system disorders e.g. cardiacy cardiacy is cardiacy viruses and fungi and ocular disorders e.g. corneal infection, bacteria, viruses and fungi and ocular disorders e.g. corneal infection, can also be used to aid wound healing and epithelial cell proliferation, to prevent skin aging due to sunburn, to maintain organs before transplantation, for supporting cell culture of primary tissues, to capabilities, fat content, lipid, protein, carbohydrate, vitamins, capabilities, fat content, lipid, protein, carbohydrate, vitamins, capabilities, fat content, lipid, protein, carbohydrate, vitamins, capabence encodes a novel secreted protein of the invention. Note: The sequence data for this patent did not form part of the printed

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                      The invention relates to human novel polypeptides and their associated polypucleotides. The polypeptides and polypucleotides are useful in gene therapy for treating, inhibiting or preventing neural disorders, immune system disorders (e.g. systemic lupus erythematosus, rheumatoid arthritis and multiple sclerosis), muscular disorders, respiratory diseases (e.g. nasal vestibulitis, nasal polyps and sinusitis), reproductive disorders, gastrointestinal disorders, pulmonary disorders, cardiovascular disorders (e.g. congenital heart defects, Ebstein's anomaly and hypoplastic left heart syndrome), renal disorders (e.g. acute kidney failure and end-stage renal disease), hyperproliferative disorders (e.g. Hodgkin's disease and eukaemia), inflammatory diseases (e.g. septic shock, bursitis and appendicitis), allergic reactions and conditions (e.g. asthma), blood related disorders (e.g. thrombosis, atherosclerosis and myocardial infarction) and cancerous diseases. Disorders which are diagnosed or treated include autoimmune CC (ELISA). Disorders which are diagnosed or treated include autoimmune CC diseases e.g. rheumatoid arthritis, hyperproliferative disorders e.g. creoplasms of the breast or liver, cardiovascular disorders e.g. cardiac CC arrest, cerebrovascular disorders e.g. cerebral ischaemia, angiogenesis, CC nervous system disorders e.g. Alzheimer's disease, infections caused by bacteria, viruses and fungi and ocular disorders e.g. corneal infection, CC and many other disorders listed in the specification. The polypeptides CC can also be used to aid wound healing and epithelial cell proliferation, CC transplantation, for supporting cell culture of primary tissues, to CC regenerate tissues and in chemotaxis. The polypeptides can also be used capabilities, fat content, lipid, protein, carbohydrate, vitamins, CC minerals, cofactors and other nutritional components. The present CC sequence encodes a novel secreted protein carbohydrate, votamins, The polypeptides can also be used capabilities fat content, lipid, protein, carbohydrate, vitamins, CC minerals, cofactors and other nutritional components. The present CC sequence data for this patent did not form part of the printed

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                The invention relates to isolated nucleic acid molecules and their encoded secreted proteins. The nucleic acids and proteins are used to prevent, treat or ameliorate a medical condition in e.g. humans, mice, rabbits, goats, horses, cats, dogs, chickens or sheep. They are also used in diagnosing a pathological condition or susceptibility to a pathological condition. Antibodies to the proteins can also be used in alleviating symptoms associated with the disorders and in diagnostic

The invention relates to human novel polypeptides and their associated CC polynucleotides. The polypeptides and polynucleotides are useful in gene therapy for treating, inhibiting or preventing neural disorders, immune CC system disorders (e.g. systemic lupus erythematosus, rheumatoid arthritis C1 and multiple sclerosis), muscular disorders, respiratory diseases (e.g. CC nasal vestibulitis, nasal polype and sinusitis), reproductive disorders, CC (e.g. congenital heart defects, Ebstein's anomaly and hypoplastic left theart syndrome), renal disorders (e.g. acute kidney failure and end-stage CC renal disease), hyperproliferative disorders (e.g. Hodykin's disease and CC appendicitis), allergic reactions and conditions (e.g. asthma), blood CC related disorders (e.g. thrombosis, atherosclerosis and myocardial CC infarction) and cancerous diseases. Sequences ABX73173-ABX74167 represent c...

DNA encoding novel human diagnostic protein #6785

Human; chromosome mapping; gene mapping; gene therapy; forensic;

```
CC sequences. (I) is useful as hybridisation probles, to and polypeptide (II) creation (PCR) primers, oligomers, and for chromosome and gene mapping, and in recombinant production of (II). The polynucleotides are also used CC and in recombinant production of (II) for polynucleotides are also used CC in diagnostics as expressed sequence tags for identifying expressed contivity of (II) or to treat disease states involving (II). (II) is useful in gene therapy techniques to restore normal CC activity of (II) or to treat disease states involving or quantitating a CC polypeptide in tissue, as molecular weight markers and as a food CC supplement. (II) and its binding partners are useful in medical imaging CC supplement. (II) and its binding partners are useful for treating disorders involving aberrant protein expression or biological activity. The CC polypeptide and polynucleotide sequences have applications in CC polypeptide and polynucleotide sequences have applications in CC polypeptide and polynucleotide sequences have application of mutations cresponsible for genetic disorders or other traits to assess biodiversity and to produce other types of data and products dependent on DNA and CC amino acid sequences. AAS64197-AAS94564 represent novel human diagnostic coding sequences of the invention. Note: The sequence data for this clattor, introduction format directly from MIPO at the printed specification, but was obtained in CC electronic format directly from MIPO at the printed specification of the sequence data for this content of the invention of the sequence content of the sequence content of the sequence data for this content of the sequence content of the sequence content of the sequence content of the sequence content of the sequence content of the sequence content of the sequence content of the sequence content of the sequence content of the sequence content of the sequence content of the sequence content of the sequence content of the sequence content of the sequence content of the sequence content of the seq

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                     The invention relates to isolated nucleic acid molecules and their encoded secreted proteins. The nucleic acids and proteins are used to prevent, treat or ameliorate a medical condition in e.g. humans, mice, rabbits, goats, horses, cats, dogs, chickens or sheep. They are also used in diagnosing a pathological condition or susceptibility to a pathological condition. Antibodies to the proteins can also be used in alleviating symptoms associated with the disorders and in diagnostic immunoassays e.g. radioimmunoassays enzyme linked immunosophant assays processes the protein and the protein can be used in the protein and the protein can also be used in alleviating symptoms associated with the disorders and in diagnostic immunoassays e.g. radioimmunoassays or enzyme linked immunosophant assays are processed in the protein can be used in the protein can be used in the protein can be used in alleviating symptoms associated with the disorders and in diagnostic amunoassays e.g. radioimmunoassays or enzyme linked immunosophant assays are processed in the protein can be used in the pathological condition.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                               New nucleic acid molecules encoding 461 human secreted proteins for diagnosing, preventing, treating or ameliorating medical conditions used as food additives or preservatives.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                      17-NOV-2000;

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                           This invention describes a novel isolated polypeptide (I) which comprising an immunogenic portion of a lung tumor protein or variant (P2) which have cytostatic activity. The polypeptides and polynucleotides are used in compositions and vaccines to inhibit the development of cancer, especially lung cancer, in a patient. Methods described in the invention can be used to monitor the progression of a cancer by carrying out the detection at subsequent time points and comparing the results from the different time points. CD4+ and/or CD8+ T-Cells isolated from a patient are treated with P2, polynucleotides encoding P2 or antigen presenting cells expressing P2 and then administered to the patient to inhibit development of cancer
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                02-APR-1999;

Mcneill
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                  ABL49254 standard; cDNA;
                                                                                                                                                                                                                                                                             The present invention describes human lung tumour proteins. Human lung tumour proteins and polynuclectides have cytostatic and immunostimulant activities, and can be used in vaccine production. Compositions comprising the lung tumour proteins, polynucleotides, antibodies, fusion proteins, Teell populations, or antigen presenting cells that express the lung tumour proteins are useful for treating lung cancer or stimulating an immune response. ABI48959 to ABI49300 and ABB74946 to ABB75770 represent sequences used in the exemplification of the present
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                               Human lung tumour L523S cDNA sequence
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                 ABL49254;

Novel lung carcinoma polynucleotide sequences and polypeptides encoded the polynucleotides, useful in pharmaceutical compositions such as vaccines and as markers to indicate the presence of lung cancer. γď

Claim 1; Page 337; 381pp; English.

The present invention describes isolated human lung carcinoma CC polynucleotides (I) and polypeptides (II). (I) and (II) have cytostatic comprising (I) or (II) can be used in gene therapy and in vaccines. Compositions CC comprising (I) or (II) can be used for stimulating an immune response in CC a patient and for treating lung cancer in a patient. Oligonucleotides of CI can be used for detecting the presence of a cancer in a patient, by CC obtaining a biological sample from the patient, contacting the biological sample with the oligonucleotide, detecting in the sample, an amount of polynucleotide that hybridises to the oligonucleotide and comparing the cCC amount of polynucleotide that hybridises to the oligonucleotide to a predetermined cut-off value, and determining the presence of a cancer in CC the patient. (I) is useful as a marker to indicate the presence or absence of a cancer such as lung cancer. ABQ92145 to ABQ92486 and ABP61866 to invention

APPLICANT: Wang, Aijun
APPLICANT: Skeiky, Yasir A.W.
APPLICANT: Henderson, Robert A.
APPLICANT: Henderson, Robert A.
APPLICANT: MCNeill, Patricia D.
ITILE OF INVENTION: COMPOSITIONS AND METHODS FOR THE
TITLE OF INVENTION: AND DIAGNOSIS OF LUNG CANCER
FILE REFERENCE: 210121.455C11
CURRENT APPLICATION NUMBER: US/09/643,597
CURRENT FILING DATE: 2000-08-21
NUMBER OF SEQ ID NOS: 369
SOPTWARE: FastSEQ for Windows Version 3.0
SEQ ID NO 347
LENGTH: 1740
TYPE: DNA
ORGANISM: Homo sapiens
